

With more than 30 years' experience and over 100 successful system migrations our insurance data migration (IDM) team are specialists in the conversion and consolidation of insurance data. For general insurance, this includes both commercial and personnel policy administration and binder management systems.

We deliver full end to end enterprise conversions or we can migrate just partial books of business e.g. following acquisition. Our migrations can include clients, policies, risk details, documents and financials to ensuring EDI for personal lines and MID for Motor. Our loyal client base includes insurers, MGA's, brokers and software vendors.

Speak to a data migration expert today – and gain know-how to ensure you get the best data migration outcome.

FEATURES

- Competitive fixed price data migrations compared to vendor or own resource
- Migration framework tools ensuring efficiency and accuracy
- Capacity to improve data quality and data gap analysis
- Options incl. Big bang, Phased and Incremental
- Collaborative environment and business engagement
- Comprehensive audit trail and data security
- One-year warranty

"IDS successfully migrated the last 7 years of data for 36 lines of business including full financials and 3 and half million documents from Websure to Transactor. I can highly recommend their migration services."

**Duncan Pritchard, Managing Director,
 Commercial Express**

INSURANCE DATA MIGRATION METHODOLOGY

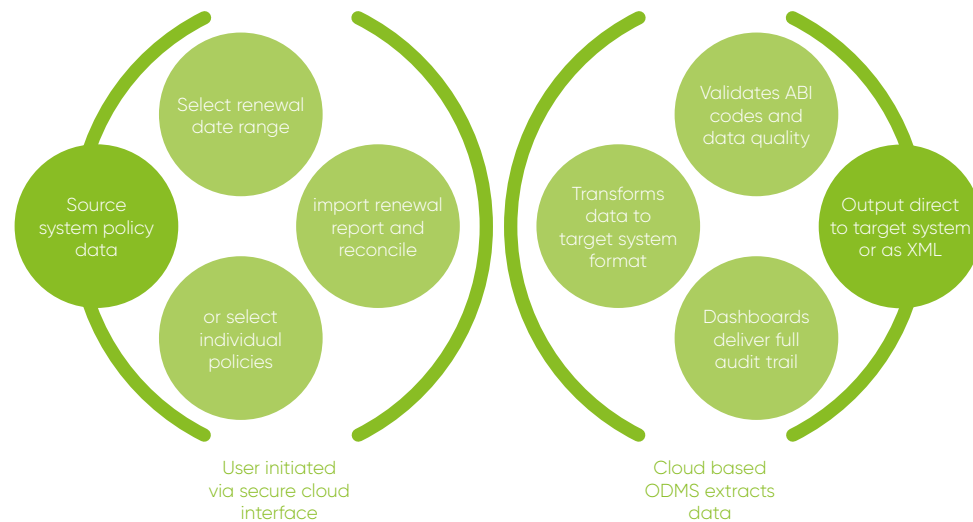

Our migration methodology and digital framework ensures data quality and demonstrates success early with a regular release schedule for testing mitigating the risk of migration errors. IDM have successfully migrated to or from: SSP Pure, Sirius, Electra M3, Acturis, Quindell, Transactor, Applied, CDL, Websure and BDX to mentioned just a few of the most popular insurance systems we have experience in, as well as many bespoke systems.

The "On Demand Data Migration Solution" (ODMS) offers an alternative option to a big bang data migration strategy. It allows you to stage the migration of data incrementally. Enabling Brokers, MGAs and Insurers to configure and initiate a data migration themselves, typically on a weekly or monthly basis ahead of renewal. Fully migrating all clients, policies and risks for any Line of Business.

ON DEMAND DATA MIGRATION SOLUTION (ODMS)

"We have been successfully using the ODMS for the last 10 months to migrate Household and Motor EDI policies at renewal on a weekly basis from SSP Electra to Open GI."

Carmen McDonagh, Chief Operating Officer, Complete Cover Group Ltd

FEATURES

- Self-service data migration tool
- Flexible in terms of dates, lines of business, source and target system combinations
- Dashboards give clear visibility and auditability
- Export function to excel

INTUITIVE AND ENSURES DATA QUALITY

No need to manually input each policy or incur the expenses, inconveniences or the risks of user errors. Simply select the policy or date range to be migrated and the solution takes care of the rest automatically.

Checks against valid ABI Codes and wider data quality issues before submission. Reconciliation checks compare against renewals list ensuring all policies have been migrated to prove the process.

IDEAL FOR PERSONAL LINES WITH OPEN MARKET EDI SCHEMES

By migrating on-renewal you avoid the issue with migrating EDI policies during the policy term. When EDI policies are migrated during a policy term the EDI count for the policy must be kept intact, this is a challenge depending on which systems you are migrating to and from. The ODMS gives you an alternative solution, without the need for a manual re-key.

COST EFFECTIVE AND SECURE

Initial set up followed by monthly license fee, which includes full support, for the period of use. Secure user authentication and minimal data held within the solution prevents the risk of data breach.
